SUMMARY

Full-stack developer with two years of turning business workflows into production software, with hands-on ownership of application development, third-party service integrations, production releases, troubleshooting and system reliability alongside frontend development.

EXPERIENCE

C S Tech Infosolutions Pvt. Ltd.

Sept 2024 – May 2026

Full-Stack Developer

Bangalore, KA

- Worked on four production applications spanning B2B commerce, warehouse operations, refurbished-device retail, and notification delivery.
- Worked directly with clients to understand operational requirements and translate them into implementable application changes.
- Built, shipped, and stabilized major parts of Dealsdray, taking the platform from an unfinished state to production; serving 30K+ daily active users and 2K+ monthly orders.
- Integrated Razorpay, PayTM, Zoop and Shiprocket into the commerce platform, building webhook flows for payment confirmation and shipment status updates.
- Handled live production systems, including server setup, outage resolution, urgent fixes, deployments, debugging, and data corrections.
- Decomposed the Dealsdray monolith into API, cron, notification, and payment microservices, separating workloads for independent scaling and releases.

PROJECTS

Prexo – Warehouse Processing System | *React, Express, MongoDB*

- Built a device-recovery utility that reintegrates unsellable units as fresh imports, recovering 30% more inventory than before.
- Fixed recurring Windows Server cron failures — from 50% of runs to 0% — with an NSSM-managed service.

Dealsdray – B2B E-Commerce Platform | *React, Express, MongoDB, Flutter*

- Built the pipeline that moved Dealsdray's 70K+ legacy users and orders data into the new system.
- Replaced per-email SMTP connections with a shared pool, eliminating exhausted-pool failures during high-volume sends.

Rekrafted – Refurbished Marketplace | *Next.js, Express, MongoDB*

- Built and shipped a product-grading feature enabling grade-specific listings and pricing, covering 70% of inventory and increasing orders 15%.
- Migrated the media library off the API server onto ImageKit, offloading 10-15GB and cutting server disk load.

Notification Console – Push Notification Delivery System | *React, Express, MongoDB, Go*

- Designed and delivered the Notification Console, cutting campaign runs from 15 minutes to under a minute.
- Handled 80K+ device tokens over 10K+ campaigns with priority-ordered, concurrent batch delivery and crash recovery.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go, HTML, CSS

Frontend: React, Next.js, Tailwind

Backend: Node.js, Express.js, REST APIs, Webhooks, Microservices

Databases: MongoDB, PostgreSQL, Redis

Infrastructure: Linux, Windows Server, AWS, Docker, IIS, Plesk, PM2

Integrations: Razorpay, PayTM, Shiprocket, Zoop, Firebase FCM

Observability & Logs: Sentry, Stackify, Grafana, Prometheus

Tools: Git, GitHub, Postman

EDUCATION

Master of Computer Applications

Dec 2020 – Jul 2022

Cambridge Institute of Technology

Bangalore, KA

Bachelor of Computer Applications

Jun 2017 – Sept 2020

Lal Bahadur Arts, Science & S.B. Solabanna Shetty Commerce College

Shimoga, KA
